Happy New Year!

St Joseph Equine Clinic
would like to wish everyone
a safe and healthy 2010!

Introducing...

Chondro-Flex EQ

Maintaining joint health is an extremely important aspect of equine preventive care. Often, joint supplements are started when a horse already has signs of joint disease to prevent further progression. Why not start a joint product before your horse has signs of joint disease?

At St Joseph Equine Clinic, we understand the importance of maintaining healthy joints. That's why we teamed up with a company to produce our new product **CHONDRO-FLEX EQ ALFALFA PELLETS**.

As you know, not all products are created equal, which is why we chose a company that manufactures high quality products and is controlled by the National Animal Supplement Council (NASC). NASC represents a benchmark of quality. To have products carry the NASC seal, manufacturers must provide facility audits, quality-control procedures, adverse event reporting, label guidelines and warning/caution statements.

Chondro-Flex EQ is an exceptional product that contains MSM, Glucosamine, Chondroitin Sulfate and Vitamin C. The alfalfa pellet formulation enhances the palatability and reduces waste. All too often powdered supplements are sifted to the bottom of the bucket and never eaten-that happens less with a pellet. **Chondro-Flex EQ** is meant to support a horse's joint function and may also help alleviate the pain associated with normal daily exercise and activity.

The active ingredients in **Chondro-Flex EQ** are comparable to other top products like Cosequin®. However, **Chondro-Flex EQ** is much less expensive than other joint supplements because our product is manufactured in smaller quantities and the expense of marketing is also minimized. This reduces financial burden on our clients and ensures that more horses can benefit from a joint product at a younger age.

See what **Chondro-Flex EQ** can do for your horse!
